DON'T GET HOOKED BY A SCAM

91%

Of cyber attacks start with a spear phishing email

Phishing is an email fraud method used by hackers and thieves. The email appears to come from a legitimate sender luring unsuspecting recipients into giving their personal, financial, or credential-related information. The scammers use that information to commit identity theft, gain access to your accounts, and even hack your computer.

SIGN UP FOR PHISHING ALERTS!

UA Information Security alerts campus about the latest phishing attacks on our website. Users can subscribe to the feed and receive alerts in their email inboxes. Go to security.arizona.edu/phishing-alerts.

HELP US: REPORT THAT PHISH!
